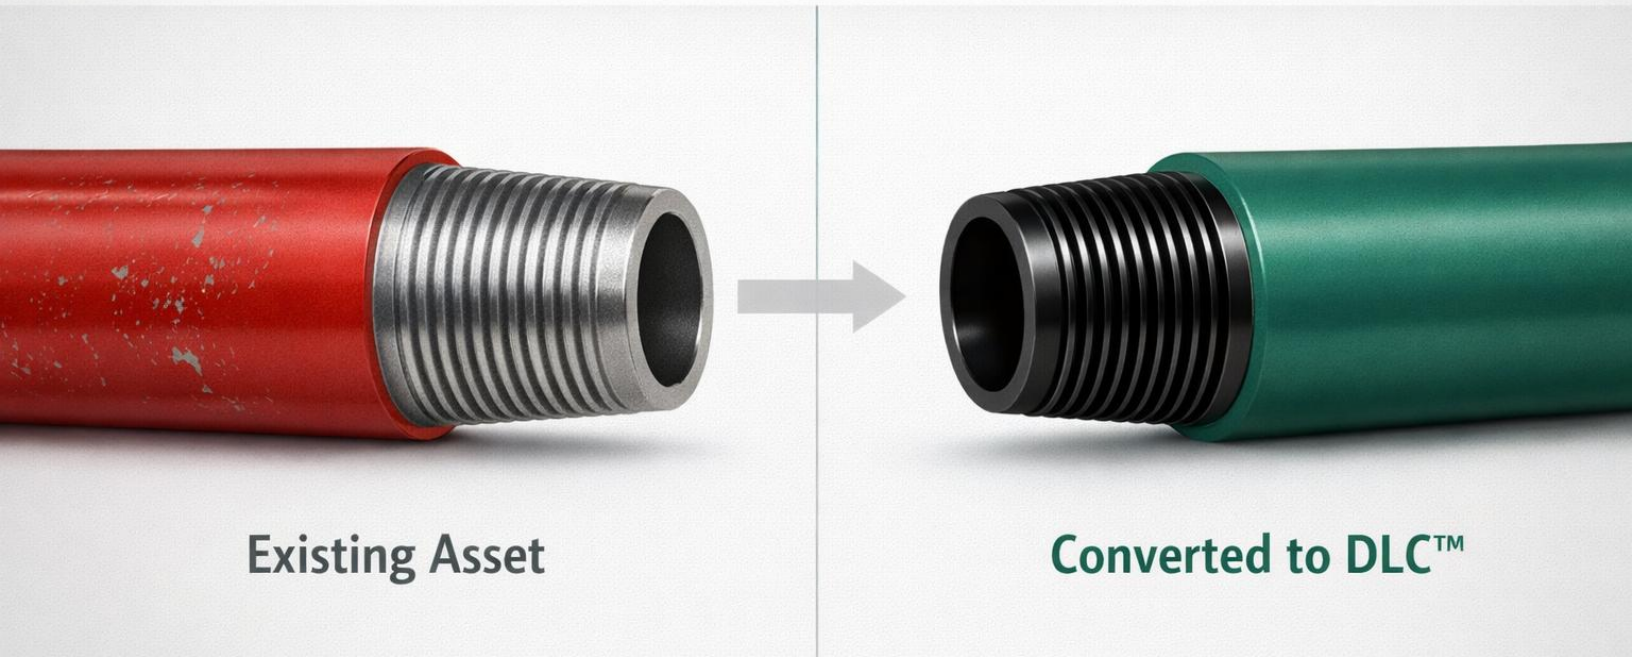
A practical path forward for existing assets.



DLC™ Connection Conversion

A practical, cost-effective path to adoption:

Connection conversion allows qualified drill string tubulars originally manufactured with another connection family to be machined to DLC™ connections. It's a smart way to help customers escape the past and adopt DLC™ to enhance the value of existing assets into the future.

Why consider conversion:

- Cost-effective upgrade path
- Reviewed for product-specific suitability
- Completed to DLC™ manufacturing standards
- Performed only by authorized facilities

What's involved:

Every conversion request is reviewed individually based on customer provided connection type, dimensions, configuration, class, grade, service history, and relevant quality records.

Important to know:

Conversion is not the same as repair, and approval applies only to the specific products reviewed for DLC™ conversion. Accurate product information is essential for review to maximize the value of the converted product, and conversion to DLC™ connections does not certify the full remaining condition or fitness-for-duty of the base drill stem product.

Upgrade your existing assets to DLC™
